Response to Official Action Dated 11 August 2006

Re: USSN 10/766,103

Page 2

Please amend the claims to read as indicated in the following list of claims:

1. (Previously presented) A reconfigurable laser transmitter comprising:

an integration platform having a silicon substrate;

a gain element, having an optical output, the gain element having a body

of material different than said integration platform, being disposed on said integration

platform;

a first optical path receiving optical output from said gain element, said

first optical path comprising a silica waveguide within said integration platform;

a tunable microresonator optically coupled with said first optical path,

said tunable microresonator having a body of material different than said silica

waveguide and being disposed on said integration platform;

a second optical path coupled with said tunable microresonator, said sec-

ond optical path comprising a silica waveguide within said integration platform; and

a fixed grating in said integration platform and coupled with said second

optical path.

2. Cancelled.

3. (Previously presented) The reconfigurable laser transmitter of claim 1

wherein said tunable microresonator comprises a microdisk or a Fabry-Perot etalon.

4. (Previously presented) The reconfigurable laser transmitter of claim 3

wherein said microdisk is heterogeneously attached to said integration platform.

Response to Official Action Dated 11 August 2006

Re: USSN 10/766,103

Page 3

- 5. (Original) The reconfigurable laser transmitter of claim 1 wherein said fixed grating is fabricated in a material having a temperature sensitivity less than or equal to 0.1 Å/°C.
- 6. (Original) The reconfigurable laser transmitter of claim 1 wherein said tunable microresonator is electrically tuned.
- 7. (Original) The reconfigurable laser transmitter of claim 1 wherein said tunable microresonator is vernier tuned.
- 8. (Original) The reconfigurable laser transmitter of claim 1 wherein said fixed grating is a sampled grating.
- 9. (Original) The reconfigurable laser transmitter of claim 1 wherein the gain element is a laser and wherein the fixed grating is a sample grating having Bragg reflection peaks for locking the laser thereto.
 - 10. (Previously presented) A method for reconfiguring a wavelength of a laser comprising the steps of:

providing an integration platform formed of silicon;

coupling a tunable microresonator having a passband to a fixed grating having a plurality of reflection peaks via a silica waveguide in said integration platform, said silica waveguide including a UV-induced sampled grating;

heterogeneously mounting the tunable microresonator on said integration platform, said tunable microresonator being formed of a material different than the silica waveguide; and

tuning said tunable microresonator such that the passband of said tunable microresonator is aligned with one of said plurality of reflection peaks of said fixed grating.

- 11. (Original) The method of claim 10 wherein said tunable microresonator is a microdisk or a Fabry-Perot etalon.
 - 12. Cancelled.
- 13. (Original) The method of claim 10 where said step of tuning is done electrically.
- 14. (Original) The method of claim 10 wherein said fixed grating is fabricated in a material having a temperature sensitivity less than or equal to 0.1 Å/°C.
- 15. (Original) The method of claim 10 wherein said fixed grating is a sampled grating.
 - 16. (Original) The method of claim 10 wherein said step of tuning is vernier tuning.
- 17. (Currently amended) A method of configuring a transmitter to transmit one of a plurality of wavelengths, said method comprising the steps of: passing a spectrum of light from a gain element into a tunable Fabry-Perot etalon or microdisk microresonator;

selecting a first portion of said spectrum of light to be transmitted by said transmitter; and

Re: USSN 10/766,103

Page 5

electrically tuning said tunable Fabry-Perot etalon or microdisk microresonator, wherein a second portion of said spectrum of light is to be transmitted by said transmitter to a sampled grating fabricated <u>in on or over</u> a silica waveguide <u>for reflection back to said gain element</u>.

- 18. Cancelled.
- 19. (Original) The method of claim 17 wherein said step of electrically tuning further comprises the step of vernier tuning.
- 20. (Previously presented) The method of claim 17 wherein the step of selecting a first portion further comprises the step of coupling a fixed optical grating to said tunable Fabry-Perot etalon or microdisk microresonator.
- 21. (Previously presented) The method of claim 20 wherein said fixed optical grating is a UV-induced sampled grating.
- 22. (Previously presented) The method of claim 17 wherein the step of selecting a first portion further comprises the step of coupling a fixed optical-resonator filter to said tunable Fabry-Perot etalon or microdisk microresonator.
- 23. (Original) The method of claim 17 wherein said spectrum of light corresponds to predetermined frequencies set according to an international standard.
- 24. (Previously presented) The reconfigurable laser transmitter of claim 1 wherein the gain element is aGaInAsP/InP semiconductor optical amplifier.

Response to Official Action Dated 11 August 2006 Re: USSN 10/766,103

Page 6

25. (Previously presented) The reconfigurable laser transmitter of claim 24 wherein the microresonator is has a body of comprising GaInAsp/InP semiconductor materials.

26. (Previously presented) The method of claim 17 further including:

forming at least another silica waveguide in a silicon integration platform, and forming the tunable Fabry-Perot etalon or microdisk microresonator from III-V semiconductor material on or in said silicon integration platform so that the Fabry-Perot etalon or microdisk microresonator is optically coupled with said at least two silica waveguides.
